

The Warren and Mary Washington Scholarship is funded by Dr. Warren and Mary Washington. They established a scholarship to be awarded to underrepresented students in the atmospheric and climate science. Dr. Warren Washington is a Past President of the AMS and became one of the first developers of groundbreaking atmospheric computer models. These models, which use fundamental laws of physics to predict future states of the atmosphere, have helped scientists understand climate change. As his research developed, Washington worked to incorporate the oceans and sea ice into climate models. Such models now include components that depict surface hydrology and vegetation as well as the atmosphere, oceans, and sea ice.....He has more than 150 publications and an autobiography, *Odyssey in Climate Modeling, Global Warming, and Advising Five Presidents*. *Dr. Washington and his wife, Mary, state "AMS has been such an important part of my career that we would like to help a new generation of young people get a good start on their own careers."*
