

American Meteorological Society (AMS)

Since 1991, AMS, in partnership with its members, corporations and federal agencies, has been supporting and engaging with the next generation of scientists. We have awarded over \$13 million in graduate fellowships and undergraduate scholarships to over 1500 students who are pursuing degrees in the atmospheric or related sciences. AMS celebrated its 100th anniversary in 2019 and as part of the celebration a Campaign was established to raise funds needed to launch new initiatives and programs that will continue to expand the diversity of AMS, strengthen and grow the weather, water, and climate community, foster student growth, and deepen our impact on science and on society. AMS brings together a vibrant and diverse community of scientists, educators, researchers, students, broadcasters, and other professionals who share knowledge, improve technology, promote understanding, and disseminate science. AMS is committed to global leadership and scientific integrity to help ensure our planet can thrive.
